Pg 159-185.

### **RESUMEN:**

The technological singularity is the possibility of achieving an artificial general intelligence that surpasses human intelligence, one of the major paradigms of life for humanity today. Nevertheless, there are only opinions on whether this goal will be achieved or not, without any concrete studies that quantify the possibilities of this event taking place or how it might take place. This chapter delves into these questions applied to the area of business.

### **PALABRAS CLAVE:**

Singularity; Paradigm; Business; Ethical.
